

GUIDE TO SELECTING AG REPLACEMENT MOTORS

2-YEAR WARRANTY

GrowerSELECT Warranty

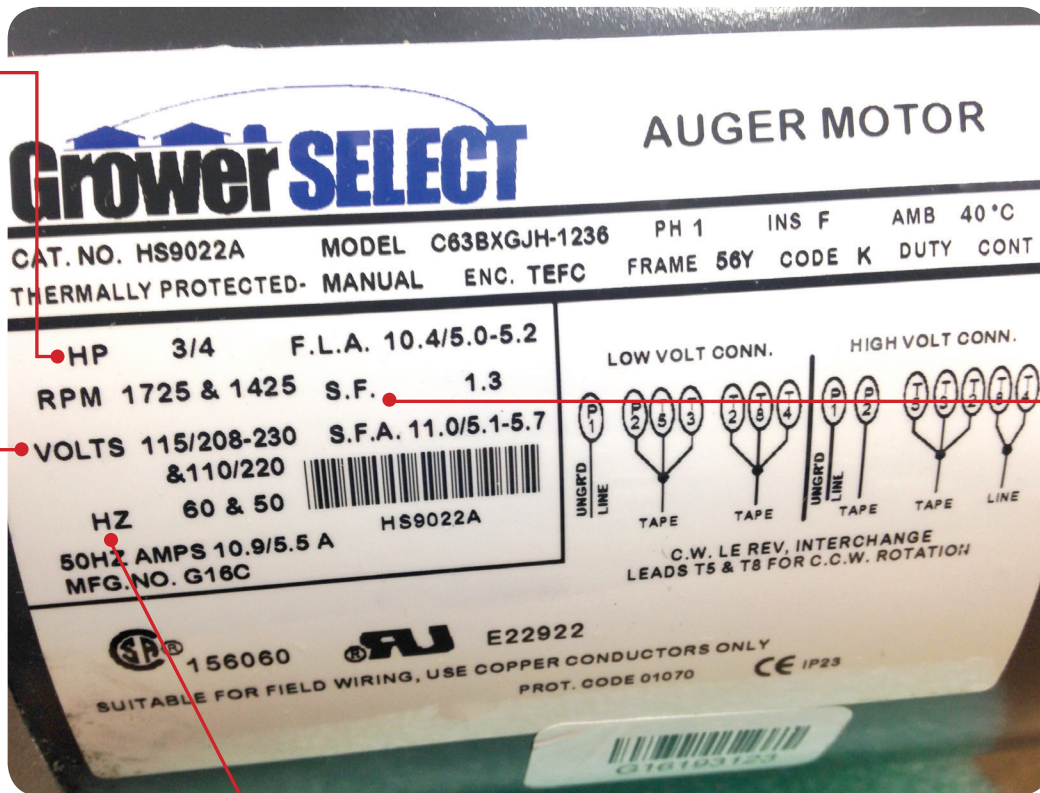

GrowerSELECT motors include 2-Year warranty from date of purchase.

Cheaper is not always the best choice. By comparing the information on a motor nameplate, we can select the best replacement motors for feeding and ventilation equipment.

Horsepower

Make sure the HP you select is right for your application.

Service Factor

The higher the service factor, the more overload the motor can handle short term.

Voltage

115/208-230 VS 115/230

The 208 rating means the motor will still be efficient with a small voltage drop, therefore 115/208-230 is better rating.

Hertz

50/60 Hz motors are usually a higher quality motor because of the amounts of steel and copper needed to make it work in a 50 Hz application.
