

EVAP SYSTEMS

Cools incoming air to reduce heat stress in buildings.

Spray Bar

Large capacity spray bar features bell end to eliminate 5" dead spots common with coupled pipe.

Trough Bracket

GrowerSELECT's heavier and wider Bi-Fold trough bracket is fabricated with two gussets for solid support.

Pad Retainer

The single point pad retainer allows complete wetting of the pad top unlike competitive systems where as much as the top 3" remains dry.

Zero Force Pad Retention System

Minimizing exterior forces to pads to eliminate pad compression over time.

Excellent Drainage

Large square poly trough offers greater drainage capacity and allows trough to sit directly on concrete foundation with or without brackets. Diamond cut poly trough cover increases drainage area by 33% allowing water to recycle quicker extending pad life.

Trouble-Free Pump

The system is fed by a trouble-free Jet or Submersible pump.

Easy Inspection

Aluminum open-top system allows for easy inspection of the spray bar. The top is secured with rust resistant brass inserts for easy removal.
