

GrowerSELECT  **HOGSLAT**
GROW-DISK™

Offering the most flexible range of feeding systems available.

Flexible Feeding

Offering the capability to feed multiple farrowing rooms or rows of gestation stalls with a single system.

Flexible Pig Management

Since the system isn't controlled by a switch in the end feeder, pigs can be sorted out of any pen without affecting its operation.

Fewer Motors

In many layouts, a Grow-Disk system will only require two motors instead of four. All motors can be located by electrical service entrance, reducing wiring and electrical costs.

It Starts With A Superior Chain

Composed of hardened steel and nylon disks, Grow-Disk's multidirectional superior chain eliminates the need for frequent tightening adjustment, allows for easy installation, and will provide years of lasting service.

Durable Corner Wheel

The heavy duty cast iron wheel turns on a stainless steel axel and a low friction, encapsulated ball bearing. The gentle feed conveying method of the wheel results in less pellet damage compared to flex auger systems. Grow-Disk offers durability and performance to chain feeding; you simply can't buy a better corner wheel.

Distinguished Drive Unit

Constructed of 304 stainless steel with a high efficiency 1-1/2 HP motor. Steel sprocket wheels with two safety switches, one each on the chain tensioner and access cover. Features a clamping rod for safety instead of cable or spring system. Connects seamless with the steel fill hopper.

Grow-Disk Pipe

18 ga. Galvanized feed tube eliminates installation problems associated with PVC pipe systems. 20' long steel sections do not sag, reducing low spots in the system that cause premature wear on disks. Tube has OD of 2.36 inches. 35% heavier coupler with extra length and four bolts for a secure connection.
