Stanchions

Hog Slat stanchions separate feeding sows to keep them from rooting less-dominant sows.

Rodded upper divider panels

for improved cross-ventilation of the facility or barn.

Designed for single-sided application or double sided application

Feed pipes are offset from the center

to give you the ability to utilize one feed line – for use with sow feed boxes.

All galvanized steel construction with PVC for years of hassle-free use.

- U-Channels bolt around the PVC plank.
- PVC planking is encased in 11-gauge galvanized u-channel to protect edges of the PVC so sows can't chew it
- PVC construction consists of 3 - 2"x8" tongue & groove PVC panels, which improves tensile strength (others use a 1-piece, thinner panel), and makes them very durable.
- Stanchion perimeter is 12-gauge 1" pipe and the sheet metal is 11-gauge
- Stack end-on-end, made to easily install to your retrofit, adapts easily, ends bolt together
